... specialists have an informational advantage over other traders near the open and close of trading that is not shared by NASDAQ marketmakers.

In determining the **opening price** for NYSE stocks, the Opening Automated Report Service automatically matches **buy** and **sell** orders. The specialist then offsets any remaining order **imbalance** from inventory. Thus, the specialist uses knowledge of market and limit orders in setting the **opening price**. (4) Stoll and Whaley (1990) conclude that the ability of the specialist to set a low (high) **bid** (ask) **price** when the **opening order** imbalance requires purchases (sales) from inventory results in monopoly profits and excess volatility. (5) In contrast, no formal opening procedure is available on NASDAQ. The...

Index Futures, Program Trading, and Stock Market Procedures

Stoll, Hans R.

Journal of Futures Markets v8n4 PP: 391-412 Aug 1988

ISSN: 0270-7314 JRNL CODE: JFU

ABSTRACT: Recent suggestions from the Securities & Exchange Commission emphasized modifications of trading procedures in the stock market. The suggestion to settle index futures at the Friday **opening price** instead of the Friday closing price has been adopted by the Chicago Mercantile Exchange. At the opening, futures specialists have considerable power, especially if disclosure of the demand and supply situation is not required. **Opening prices** are more volatile than closing prices and exhibit price reversals. These empirical findings and an analysis of current opening procedures suggest that changes in opening procedures might be advisable, particularly on expiration days. Such changes should include more frequent and more complete dissemination of information on the size of **imbalances** and likely **opening prices**, plus more opportunities for **market participants** to revise trading intentions before the opening. The main advantage to using the **opening price** is that the opening can be delayed more easily than the closing if a large **imbalance** in orders suddenly occurs. ...

... securities firms provide liquidity by making markets in debt (bonds) and equity issues (common and preferred stock). At any given moment there usually is an **imbalance** in the number of individuals who want to **buy** or **sell** a particular security at the market price. Market-makers provide immediacy by buying and selling for their own accounts, putting their own capital at risk...

...On an annualized basis, the value of new equity issues in the first-half of 1991 exceeded the highs set in 1986 and 1987. While **initial** public **offerings** increased substantially in 1991, the largest growth ...1987 levels. Volume in the primary market for equity securities saw an even sharper drop after the 1987 market break, with the dollar value of **initial** public **offerings** and new securities from established companies falling to levels less than half those of the preceding years. Investors shied away from equities, and their reduced...

...break, but volume quickly returned to the highs reached in 1987. Increases in the volume of new issues of investment grade debt compensated for the **initial** drop in **demand** for high-yield bonds. But in 1990, the market for new issues of high-yield bonds collapsed completely. Given the relatively high spreads on these...

ABSTRACT: Brokers and traders can use special software to access dedicated **networks** that allow shopping on all traditional exchanges and electronic communication **networks** (ECN). Companies such as Tradescape.com, TradePortal, and TradeCast offer the fastest trades at the best **prices**, thereby **opening** a way to bypass **market makers**. Direct-access software with intelligent order routing, characterized as 'third generation' technology, has a potential to make the market transparent and more efficient, and therefore...

... Debt takes off

The sluggish development of e-underwriting is not due to lack of interest by either issuers or investors. Once debt deals came **online**, investors swarmed the product. UBS Warburg, which led one of the first **online** bond deals, says that by the end of the second quarter, 45% of its U.S. and Canadian bond investors participated in an electronic bond...

...This year you'll see click-and-trade on all types of bonds. You will see much better and broader acceptance of e-commerce by **market participants**," says Stuart Clenaghan, executive director and head of e-commerce for UBS, noting that the e-bond has become a regular part of the firm...

...really like to use the platform. So far this year, UBS, Goldman Sachs, Morgan Stanley, Merrill Lynch & Co. and CSFB have all debuted their proprietary **Web** sites, offering those few multi-billion dollar bonds. But for the most part, the sites are used by traders to move Treasurys, AAA-rated corporates...

...market in Treasurys is so deep that you could do 50 bonds on the screen in a locked market." Goldman Sachs, for example, uses its **Web** .ET product to cut out traditional secondary market middlemen like Schwab Capital Markets. By using Goldman's **Web** product, an investor can find a bond trading at a specific price, click on it, and instantly buy the bonds. Indeed, a smoother secondary pricing...

...with a different dynamic in the bond markets than it has ever had to before," says CSFB's Cohen. The multi-dealer advantage Since the **online** debt world looks to become the land of lower profits, a good number of Street firms have decided to cut their losses even further and...e-bond professionals is to guess which of these sites are going to last. Market players say one possible candidate is TradeWeb, on whose site (www.tradeweb.com) players can trade Treasurys and soon, agency securities. The company has equity stakes from such firms as Goldman, J.P. Morgan, Chase Manhattan...

...in TradeWeb. In muni bonds, Goldman has also linked with Paine Webber Group and Bear Stearns & Co. to create MuniGroup LLC, a municipal bond trading **network**, while Salomon Smith Barney, Morgan Stanley and Merrill have bought into TheMuniCenter. While cooperation is now the name of the game, bankers expect that the...

...to the Federal Trade Commission about the monopolistic potential of something like a BondBook, which could control more than 40% of bond traffic on the **Internet** if it became the de facto home base for Goldman, Merrill and Morgan Stanley. Several bankers predict a tiering in which the multi-dealer sites become the main hub of **Internet** bond underwriting activity while the dealer-specific sites are geared more toward cutting costs out of the primary market underwriting process as well as being...

...go beyond plain-vanilla offerings and sell riskier, less liquid offerings like derivatives through DebtWeb this year. Equities: business as usual While developments in the **online** world of debt have been noteworthy this year, the same can not be said for what's happened in equities. There, it's "business as...

...research analyst with Robertson Stephens. "E-underwriting for stock deals is a ways off," says Moody's O'Connell. "Firms are starting to use the **Internet**, but it's like a glorified fax machine." The major Wall Street firms seem content to watch what the new **online** upstarts are doing. So far, there's little to envy. Justified or not, W. R. Hambrecht's

four lead-managed deals are perceived as flops...

...now, the regular players are in no hurry. "Why should they be?" says Appleby. "The situation is to their benefit." Traditional investment banks now view **online** capabilities as a way of expanding and facilitating business-what O'Connell refers to as a glorified fax machine. But they are trying to avoid incorporating the **online** capabilities that would hurt their profits. "The novelty of **online** IPOs is wearing off," says Mark Loehr, co-president of Wit SoundView, which sold its retail accounts to E*Trade Group in May. "E-underwriting..."

...is. (It's one that is open to both retail and institutions bids.) The traditional players also experiment at the edges of electronic underwriting, placing **online** retail allocations with the likes of Schwab, DLJ Direct or E*Trade. Most banks are also developing technologies in their labs, and some have invested...

...while the core of deal-making hasn't changed much, technology is more and more present as a deal facilitator: in electronic road shows, in **online** indications of ...which is being financed by Goldman Sachs, J.P. Morgan and CSFB. The AZX, it turns out, has a transparent auction platform for determining the **opening price** of an IPO on its first day of trading. The auction, say CSFB officials, will eliminate the volatility and artificially high prices new issues often...

...process. "In general, for most products, the market is not interested in auto-pricing securities at this time," says Michael Packer, head of Merrill's **online** effort. "However, we do have auction capabilities for markets where that functionality is relevant and will support auction and other price discovery processes wherever the market asks for it." While Merrill's competitors began letting investors make **online** indications of interest in this year's big debt deals, for the most part, Merrill shied away from that. "The value of this to investors..."

...type of investor knowledge that comes from transparency is likely to lead to lower commissions, which few on Wall Street are rooting for. "What the **Internet** is doing is accelerating a movement towards greater democratization of the industry," says E-Finance Partners' Curtin, who thinks the solutions will come from outside...

...lack of price transparency. There are huge opportunities to transform what is being done." But there are still some inefficiencies in the system that even **online** capabilities may have trouble rooting out. "The demand and supply problem will never get fixed," says Wit's Loehr, referring to the difficulty that retail investors have getting in on hot offerings, as occurred during the recent IPO boom. The new **online** firms have promised to change that through their more equitable process, but so far, little change has occurred. "The better the deal, the harder it is to get shares," says Loehr. Wit, Hambrecht and Epoch Partners, the new **online** investment bank that plans to distribute shares to customers of owners Schwab, Ameritrade and TD Waterhouse, are satisfied that at least retail investors get allocations. Wall Street's traditional underwriters have also included retail allocations of IPO shares to **online** customers. Most, like Morgan Stanley and Merrill Lynch, allocate to their own customers. Others search among the millions of customers of the **online** brokerages for profiles of those most likely to hold onto the stock. These may include affinity groups or buyers of similar technology stocks. The rule...

...the more esoteric the company's product, the more suitable its stock is for an institutional client. Like many other banks, CSFB has used various **online** distribution channels with varying degrees of success. "We learned that **online** distribution can have a useful role in executing a transaction," says Ted Hatfield, managing director and syndicate head in

equity capital markets at CSFB. He...

...investors, says that in its four IPOs, the deals ran about half institutional and half retail. And while W.R. Hambrecht is considered the purest **online** bank, pricing is still not done automatically. Price indications come in electronically, but if the banker thinks they are too high, and the issuer agrees...on the opening. Hambrecht's prowess has been criticized, given the poor performance of its IPOs. But its business model has reinforced the notion that **online** underwriting lowers fees. Indeed, Hambecht charges less than the major Wall Street firms. While those firms might charge 7% of the proceeds for an IPO...

... Nasdaq's Quality of Markets Committee will examine an NASD proposal to allow institutions to enter orders into the new system through sponsorship arrangements with **market makers**. According to a report obtained by the **trade** publication, the NASD is exploring **pre -opening** sessions on Next Nasdaq.

The report noted that **orders** transmitted to **market makers** or an electronic communications **network** (ECN) would be automatically executed. However, if an order exceeds 1,000 shares, but is less than 5,000 shares, and "the quote is equal to or greater than the order size, the order will be presented for 20 seconds for action by the **market maker** or ECN," the reported stated. "If the order is not executed during that time, the system will default to an execution of the order." An...
